PATHOLOGY

June 18, 1974

*Am
27*

Dr. Joseph A. Jachimczyk
209 Court House Building
Houston, Texas 77001

Dear Joe:

Enclosed is all of the tissue that I have left from the body of Billy Lawrence, the first of my series of four examined in San Augustine last August tenth, and the only one that did not come through your office. Don Lambright, Harris County Assistant District Attorney, asked that I send it to you for toxicologic analysis that you could testify to it in San Antonio next month. Many thanks.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jack Pruitt", with a large, stylized loop at the end.

Jack Pruitt, M. D.

AUTOPSY REPORT

(Series No. 20) *(NOT IN HO SERIES)*

Name: Body No. 1, identified as William Ray Lawrence
Date of Autopsy: August 10, 1973, 12:30 p.m.
Place of Autopsy: Wyman Roberts Funeral Home, San Augustine, Texas
Authority: San Augustine County, Texas Justice of the Peace C. A. Renfroe #1
Autopsy Prosecutor: Jack Pruitt, M. D.

CIRCUMSTANCES: Body found buried near Broadus, Texas, on the afternoon of Thursday August 9, 1973.

GROSS EXAMINATION: The unclothed body is fully wrapped in a thick transparent plastic sheet and tied with several lengths of thick cord resembling venetian blind cord about 1/8 inch in diameter. The body is that of a slender white adolescent male 68 inches in length, the weight not estimated. The scalp hair is light brown and straight, about shoulder length, 12 - 15 inches. The wrists are secured behind the body with fabric adhesive tape. The legs are similarly taped together just above the ankles. A noose of thick cord like that described around the original plastic wrapping is secured around the neck, typical of a "hangman's noose", with a loose end 12 inches long extending down the back. The tissues of the neck are compressed, and indicate that this was applied tightly before death.

The skin is essentially intact over the entire body, although very slippery and having advanced postmortem decomposition, and there is no evidence of any penetrating wound. The outer skin surfaces over the fingers and toes have sloughed away, and make fingerprint identification impossible, according to two Texas Department of Public Safety Investigators present at the scene. The facial features can be recognized, although the nose has advanced decomposition, the bones intact, no recognizable evidence of trauma. Two teeth are out of their sockets, numbers 1 and 8 as indicated on the accompanying dental chart, postmortem in character, apparently all 32 teeth having erupted and having no evidence of decay or filling (see dental chart for description). The penis, scrotum and anus are intact, without evidence of mutilation, the pubic hair intact and recognizable.

The heart, lungs, and abdominal organs are shrunken and pasty, virtually unrecognizable, but without evidence of severe antemortem trauma.

According to information supplied by the father and the dentist, as well as a photograph published in the Houston Post, this body was identified as that of William Ray Lawrence, 15-year-old white boy. The condition of the body is consistent with a postmortem interval of approximately one month.

MICROSCOPIC EXAMINATION: Microscopic examination of the solid organs is of no value because of the severe postmortem decomposition of the tissues.

PATHOLOGIC DIAGNOSIS AND CAUSE OF DEATH: Death by strangulation, postmortem interval of about one month.

Jack Pruitt, M. D., Diplomate
of the American Board of Pathology

OFFICE OF THE MEDICAL EXAMINER
OF HARRIS COUNTY

HARRIS COUNTY COURT HOUSE
HOUSTON, TEXAS 77002

AUTOPSY REPORT

Case 73 - 3378

August 15, 1973

PATHOLOGICAL DIAGNOSIS ON THE BODY

OF

Unknown #22

Asphyxia due to strangulation.

OPINION

It is our opinion that the decedent,
Unknown #22, came to his death as a
result of asphyxia due to strangulation -
Homicide.

Joseph A. Jachimczyk, M.D., J.D.
Chief Medical Examiner

(See Companion Cases 73 - 3376 and 73 - 3377)

POSTMORTEM EXAMINATION ON THE BODY OF

UNKNOWN #22

HISTORY: This unidentified white male body was found at approximately the same time that three other bodies were uncovered during the evening of August 9, 1973, near Lake Sam Rayburn in San Augustine County, Texas. One was identified as William Ray Lawrence. His body was not sent to the Harris County Morgue. The remaining three were sent to this morgue. (73-3376, 73-3377 and 73-3378.) The three bodies arrived at the Harris County Morgue at 1:00 p.m. on August 11, 1973.

AUTOPSY: The autopsy was performed by Chief Medical Examiner Joseph A. Jachimczyk, M.D., assisted by Assistant Medical Examiners Ethel E. Erickson, M.D., and G. Sheldon Green, M.D., and Dr. Paul G. Stimson, beginning at 10:15 a.m. on August 15, 1973, in the Harris County Morgue.

EXTERNAL APPEARANCE: The decomposing body was that of a young Caucasian male, measuring approximately 68 inches in length and weighing a residual 75 pounds, submitted in a crashbag. The body was covered with white embalmer's preservative powder. The head was covered with fairly short dark brown hair, measuring up to 3-1/2 inches in length. The body had been previously autopsied. There were no clothes.

Complete postmortem X-rays of the body did not reveal the presence of any radiopaque objects.

INTERNAL EXAMINATION: Section: The body was opened through the previously made Y-shaped prior autopsy incision. The abdominal and thoracic viscera were re-examined. The body cavities emitted an unpleasant aroma.

HEART: The heart was decomposing.

LUNGS: The lungs together weighed 450 grams. They were collapsed and decomposing.

LIVER: The liver weighed 450 grams. The liver was mostly autolyzed. The gallbladder was empty.

Pancreas and Adrenals: The pancreas and adrenals were autolyzed.

SPLEEN: The spleen weighed 50 grams. There was postmortem decomposition.

GENITOURINARY TRACT: The kidneys together weighed 50 grams. They were autolyzed.

GASTROINTESTINAL TRACT: Most of the intestines were eaten away with lime. The stomach was empty.

BONES: There was a complete postmortem separation of the vertebral column between the 1st and 2nd lumbar vertebrae. The left femur was disarticulated from its acetabulum. A good portion of the soft tissue was absent. There was post-mortem absence over the right and left elbows. The distal epiphysis of the left ulna was not fused.

NECK: The hyoid bone was intact. There was hemorrhage into the tissue surrounding the hyoid bone. There was periesophageal hemorrhage. There was hemorrhagic discoloration of the larynx and first portion of the trachea on the inner surface. The thyroid cartilage was intact, but there was hemorrhage around the thyroid cartilage.

HEAD: The scalp was reflected in the usual coronal fashion. The calvarium was not remarkable. There were no skull fractures. The brain was mushy. The residual brain weighed 750 grams.

Following the autopsy, a second set of X-rays was made in order to attempt to determine the skeletal age of this individual.

The first film was an anteroposterior view of the chest and shoulders and included most of both humeri. The spine was intact. The ribs were intact. Both clavicles were visible. There was no evidence of a medial clavicular epiphysis. Most of both scapulae could be seen. The proximal humerus epiphyses were not fused. A distinct epiphyseal plate was visible in both. None of the anular epiphyses of the vertebral column appeared to be fused.

A film of the pelvis showed considerable rotation. Portions of both forearms and hands were visible. Technical detail of the latter was good, while the pelvis was underpenetrated. The distal epiphyses of the right radius was well defined. It was not fused, and there was a distinct epiphyseal plate.

The distal portion of the left radius was also well defined and also showed no fusion. In the pelvis, only the anterior portions of the iliac crest epiphyses were well visualized. These showed a distinct epiphyseal plate and appeared not to be fused. The proximal ends of the femurs were barely visible and could not be evaluated. Two of the left metacarpals were quite well demonstrated. Both appeared to have completely fused epiphyses.

Film of the knees showed a well defined epiphyseal plate in the distal femurs. Fusion, if any, was very early. The proximal tibial epiphyses were less well visualized, but there were cortical defects at the margins of the epiphyseal plates and these appeared not to be fused. The fibulae were not well visualized.

The fourth X-ray showed the feet and ankles in the dorsal plantar view. The distal ends of the long bones of the legs were not well visualized. The metatarsal epiphyses all appeared to be completely fused. The epiphyseal lines were present in several of the proximal phalanges. They were most clearly defined in the proximal phalanges of the great toes, particularly at the proximal ends. These appeared to be unfused or only partially fused, as there was some suggestion of cortical defect at the margins of the epiphyseal plates.

Based upon the X-ray criteria, the age was estimated to be approximately 15 to 18 years.

DENTAL EXAMINATION

Utilizing the Universal System, all of the third molars are partially erupted. The upper left central, number 9, and the upper left lateral, number 10, are avulsed. The upper right second bicuspid, number 4, has undergone a 180 degree rotation. The buccal and lingual cusps are reversed. Number 22 is in mesial labial rotation. Number 25 is in lingual version, blocked out by tooth 24 and 26. Number 26 is in mesial labial rotation and number 27 is in mesial labial rotation. Jaw relationships are normal. The peridontal condition is average. Caries are noted as follows: the upper right second molar, number 2, has distal and occlusal pit caries. The upper right first molar, number 3, has distal and occlusal pit caries. There is occlusal caries on the upper left first bicuspid, number 12, on the upper left second bicuspid, number 13, on the occlusal and distal occlusal pits on the upper left first molar, which is tooth 14. Caries is present on the occlusal and distal pits on the upper left second molar, which is tooth 15, on the lower left second molar, occlusal caries, which is tooth 18. On the occlusal on the lower left second bicuspid, which is tooth 20, occlusal caries, on the lower right first bicuspid, which is tooth 28, and on the lower right second bicuspid, which is tooth 29, and an occlusal caries on the lower right second molar, which is tooth 31.

Paul G. Stimson, D.D.S., M.S.

Location, Position, and Surroundings of Body:

The decedent was lying face upward in a grave.

Clothing: The decedent was nude.

Information: San Augustine County Sheriff's Department, San Augustine County, Texas, Deputy Sheriff Richard Davis furnished the following information on August 11, 1973, at the Harris County Morgue, Houston, Texas.

The decedent identified as "Unknown #22" was found about 7:00 a.m. on August 10, 1973, when Elmer Wayne Henley (suspect in this case) led San Augustine County Sheriff's Department, Sheriff John Hoyt to a gravesite located about 5-4 feet from the gravesite of William Ray Lawrence, near the above location. Henley identified the gravesite by several crossed sticks on top of the ground. He specifically remembered this gravesite inasmuch as he returned subsequent to the original burial of the decedent and found that something had dug into the ground about the gravesite. Henley then placed a masonite board over the hole and covered the board with a thin layer of earth under which there was a lime substance, under which there was a masonite board, under which was the hole in which the decedent was placed, rolled into a plastic covering and taped shut with silver colored air conditioning tape. Decomposition was advanced, according to the Deputy Sheriff. Scene photographs were taken by Department of Public Safety, Austin, Texas. The decedent was taken to Wyman Roberts Funeral Home in St. Augustine, Texas, on August 10, 1973, by Dr. Jack Pruitt of Lufkin, Texas. The diagnosis was strangulation. Deputy Davis said that Henley made the (over)

Place of Death: 2 1/2 miles South of Broadus, Texas off FM-3185, St. Augustine County
Place of Inquest: _____
Date and Time of Inquest: _____ A.M.
Location, Position, and Surroundings of Body: SEE BELOW P.M.

Clothing: NAKED- Face up in grave

Information: St. Augustine County Dep. Sheriff RICHARD DAVIS furnished the following info. on 8-11-73 at 7286.

St. Augustine County Sheriff JOHN HOYT, Box 61, St. Augustine, Texas, was directed to a gravesite near the above location by WAYNE HENLEY (suspect in the above case) on 8-9-73 about 8:00PM. HENLEY identified the gravesite as being at a point where 4 sticks were crossed on the ground. Beneath the crossed sticks was a thin layer of earth beneath which there was a plywood. Beneath the plywood was a hole in the ground into which had been placed a substance similar to lime, along with a plastic covering, securely taped, containing the body of the decedent. The decedent's body had been rolled in the plastic covering, but none of the lime substance was within the plastic covering. A cord tied in a "hangman's noose" was around the neck of the decedent. His ankles were bound together with silver colored ~~xxx~~ air conditioning tape. His wrists were taped behind his back with similar tape. The grave was about 18"-19" in depth and there were two cinderblocks in the grave.

Photos were taken at the scene by D.P.S., Austin.

An autopsy was performed at the Wyman Roberts FH, St. Augustine, Texas on 8-10-73 by Dr. JACK FRUITT of Lufkin, Texas. DX: STRANGULATION.

DEP. DAVIS SAID THAT HENLEY MADE THE STATEMENT THAT ONE OF THE "UNKNOWN #20, #21 OR #22 COULD BE A BOY NAMED "GARCIA."
The cord found around the decedent's ~~xxx~~ neck was tagged at 7286 under Property: NONE) the name WILLIAM RAY LAWRENCE.

Transferred to Morgue by: SUBSEQUENT TO THE AUTOPSY IN ST. AUGUSTINE THE BODY OF THE DECEDENT WAS RELEASED BY ST. AUGUSTINE COUNTY AUTHORITIES TO FOREST PARK FH. Funeral Home Conducting Service: Forest Park FH

AUTOPSY REPORT

JACK PRUITT, M. D.
RAUL M. GUTIERREZ, M. D.

(Series No. 20) *(Not in the series)*

Name: Body No. 1, identified as William Ray Lawrence
Date of Autopsy: August 10, 1973, 12:30 p.m.
Place of Autopsy: Wyman Roberts Funeral Home, San Augustine, Texas
Authority: San Augustine County, Texas Justice of the Peace C. A. Renfroe #1
Autopsy Prosecutor: Jack Pruitt, M. D.

CIRCUMSTANCES: Body found buried near Broadus, Texas, on the afternoon of Thursday August 9, 1973.

GROSS EXAMINATION: The unclothed body is fully wrapped in a thick transparent plastic sheet and tied with several lengths of thick cord resembling venetian blind cord about 1/8 inch in diameter. The body is that of a slender white adolescent male 68 inches in length, the weight not estimated. The scalp hair is light brown and straight, about shoulder length, 12 - 15 inches. The wrists are secured behind the body with fabric adhesive tape. The legs are similarly taped together just above the ankles. A noose of thick cord like that described around the original plastic wrapping is secured around the neck, typical of a "hangman's noose", with a loose end 12 inches long extending down the back. The tissues of the neck are compressed, and indicate that this was applied tightly before death.

The skin is essentially intact over the entire body, although very slippery and having advanced postmortem decomposition, and there is no evidence of any penetrating wound. The outer skin surfaces over the fingers and toes have sloughed away, and make fingerprint identification impossible, according to two Texas Department of Public Safety Investigators present at the scene. The facial features can be recognized, although the nose has advanced decomposition, the bones intact, no recognizable evidence of trauma. Two teeth are out of their sockets, numbers 1 and 8 as indicated on the accompanying dental chart, postmortem in character, apparently all 32 teeth having erupted and having no evidence of decay or filling (see dental chart for description). The penis, scrotum and anus are intact, without evidence of mutilation, the pubic hair intact and recognizable.

The heart, lungs, and abdominal organs are shrunken and pasty, virtually unrecognizable, but without evidence of severe antemortem trauma.

According to information supplied by the father and the dentist, as well as a photograph published in the Houston Post, this body was identified as that of William Ray Lawrence, 15-year-old white boy. The condition of the body is consistent with a postmortem interval of approximately one month.

MICROSCOPIC EXAMINATION: Microscopic examination of the solid organs is of no value because of the severe postmortem decomposition of the tissues.

PATHOLOGIC DIAGNOSIS AND CAUSE OF DEATH: Death by strangulation, postmortem interval of about one month.

all teeth apparently in, but #1 out post-mortem, found in pharynx, no trauma; #8 out post-mortem, not found, no trauma. — socket smooth, resembles #9.

#9 (left upper medial incisor) larger & more prominent than others, small "chip" mesial tip, which if matched with absent #8 would form a notch.

No recognized cavities, no fillings.

Other characteristics for identification:

1. Height 5'8", slender, weight not estimated.
2. Long straight brown hair, about shoulder length, est. 12-15 inches in longest portion.
3. Eyes apparently blue, but marked post mortem decomposition.
4. Features resemble photo Houston Post Sun. 8-12-73

[illegible]

I referred this patient over to Dr. B.T. Kunkel. I doubt if he ever went to his office, because, I never received any follow-up X-rays from his office concerning endodontic treatment.

The enclosed fingerprints and/or correspondence are being returned to you because of the reason(s) indicated below:

- ☐ (Contributor) (Registration) (Service) number omitted.
- ☐ Incomplete descriptive data.
- ☐ Indicate correct sex of subject.
- ☐ Name (not shown at top of card) (name and signature differ).
- ☐ Date of birth (not given) (not clear) (incomplete). If unknown, give approximate age.
- ☐ Charge and/or date of arrest not given.
- ☐ Inked finger impressions not on card.
- ☐ Advise reason for submission of fingerprints; if criminal, furnish charge; or, if applicant, furnish position for which applying.
- ☐ FBI number omitted. Rolled impressions of all ten fingers, plus plain impressions, must be submitted if FBI number not available.
- ☐ Advise if subject is deceased.
- ☐ Furnish final disposition.
- ☐ Impressions not black on standard white fingerprint card stock.
- ☐ Apparently mailed to us by mistake.
- ☐ Our records fail to reveal a statute from your state requiring fingerprinting for the position indicated on the enclosed card(s).
- ☐ There is no indication the enclosed cards and/or correspondence have been processed through your state identification bureau of central agency prior to submission to the FBI.
- ☐ Enclosed card may have been submitted by your office. Please list contributor, and return to FBI. If not submitted by your office, please advise.
- ☐ We do not include information unsupported by fingerprints in our files.
- ☐ Finger impressions on attached card are identical with those on file for subject of attached record; however, the description data on the card evidently pertains to another individual.
- ☐ Descriptive data on attached fingerprint card is similar to that on file for subject of attached record; however, finger impressions are for another individual.
- ☐ Finger impressions are identical with those on file for subject of FBI No _____; however, name and description are similar to information on file of subject of FBI No _____.
A copy of each record is attached.
- ☐ Search by name only has been conducted with negative results.
- ☐ Fingerprint search has been conducted with negative results.
- ☐ Essential information omitted; ☐ name, ☐ sex, ☐ descriptive data, ☐ DOB, ☐ fingerprints, ☐ person to be notified in case of emergency.
- ☐ Submit ten finger impression fingerprint card (refer to our letter to all fingerprint contributors dated 6/17/85, copy attached).
- ☐ Fingerprint card with nonserious offense/no arrest charges.
- ☐ Fingerprint card with missing/incorrect contributor's name and number.
- ☐ Fingerprint illegible - submit another fingerprint card.
- ☐ REJ/50 - Transaction received for processing matches NFF record from your state.
- ☐ REJ/51 - SID on file different than SID on print.
- ☐ REJ/52 - SID previously established for another FNU.
- ☐ REJ/53 - SID missing for NFF participant.
- ☒ Other UNABLE TO PROCESS FINGERPRINT CARD WITH #10 FINGER ONLY.

After making appropriate changes and/or additions, please resubmit. Your cooperation is appreciated.
